

Dear Readers,

The staff of the scientific journal Logistics and Transport according to the changes announced before is going to extend the thematic scope of published articles to the questions concerning technical transport infrastructure, especially of land transport.

Designing, operating and maintenance of technical objects related to the railway and road infrastructure, as well as inland water and others types of transport, are frequently discussed on various for a by transport technicians and engineers.

According to the profile of our journal the main topics within the technical transport infrastructure domain will be: methods of design, research of technical objects, diagnostic and maintenance, operation process, as well as protection of natural environment.

We hope reports on research findings, new technical solutions and practical experiences concerning transport technical objects published in our quarterly will facilitate constructive exchange of the opinions.

Prof. Kazimierz Towpik
